Brahmi Abbes

Laravel / PHP Developer

Algeria | aa.brahmi@ensta.edu.dz | +213 551 376 996 | GitHub | LinkedIn

PROFESSIONAL SUMMARY

PHP and Laravel developer who has independently built and shipped three complete Laravel applications, covering Eloquent data modeling, Filament admin panels, Laravel Reverb real-time broadcasting, Redis-backed queues, and Spatie-based role permissions. Comfortable across the Laravel ecosystem — from migrations and business logic to automated testing with Pest.

TECHNICAL SKILLS

Laravel Ecosystem: Laravel 11/12, Eloquent ORM, Blade, Laravel Reverb, Laravel Echo, Filament, Spatie Laravel Permission, Pest

Language & Database: PHP, MySQL, SQL, Relational Data Modeling, Redis

Frontend (Laravel-integrated): Blade, Tailwind CSS, Vite, JavaScript

Tools: Git, GitHub, Docker (basic)

PROJECTS

Pharmacera — Pharmacy Management System | *Laravel 12, Filament 5, Eloquent, MySQL, Docker* | *Private repository*

- Built a multi-role system (Owner/Pharmacist/Cashier) using Spatie Laravel Permission and a custom HasRoleAuthorization trait.
- Modeled FIFO batch inventory with expiry tracking and row-level locking (BatchObserver) to keep barcode-scan-to-sale operations consistent under concurrent access.
- Built the Filament 5 admin panel with full Arabic (RTL), French, and English localization, plus PDF report generation via barryvdh/laravel-dompdf.
- Implemented automated low-stock email alerts and a full audit-trail activity log.
- Wrote Pest tests for core business logic; containerized with Docker and deployed to Render with OPcache enabled.

SketchRush — Real-Time Drawing & Guessing Game | *Laravel, Laravel Reverb, Redis, Eloquent, Docker* | GitHub

- Built the real-time layer on Laravel Reverb and Echo for WebSocket broadcasting, backed by Redis for presence and live game state.
- Used Laravel's delayed queued jobs on a Redis queue connection to implement a server-authoritative round timer.
- Modeled the full game state machine and scoring/streak logic in Eloquent, with a whole-game clue budget separated from per-round reveal limits after diagnosing a conflation bug between the two.
- Wrote a Pest test suite (scoring, hint reveals, turn advancement, guessing, room creation); used Docker to containerize the app for local development.

DevDZ — Community Platform for Algerian Developers | *Laravel 11, Eloquent, MySQL, Blade* | GitHub

- Modeled relational data (users, posts, comments, votes, tags) in Eloquent to support voting, commenting, and keyword search.
- Built custom authentication, session handling, CSRF protection, and middleware.
- Resolved a database constraint bug on the vote table and fixed Vite/PHP version issues blocking deployment; deployed on Railway.

EXPERIENCE

IT Department Intern — Sonatrach (TRC / GEM Gazoduc) | *April 2026*

- Observed enterprise IT operations and infrastructure workflows during a one-week placement.

EDUCATION

Bachelor in AI Engineering (in progress) — École Nationale Supérieure des Technologies Avancées (ENSTA), Algiers

LANGUAGES

Arabic — Native | English — Professional working proficiency
